

Goals and Objective

Get competent in CFD as fast as possible. I am not in an ideal situation where I have a load of time to get good at CFD. I will need to multitask, learning the necessary skills effectively. Furthermore, I'll be updating what I learned and how I went about doing this for others to refer to in the future. I will also review the methodology I employed and possible changes I would recommend if I think some other sequence is better.

Goal

“ Learn CFD effectively as fast as possible.

I need to be production ready in the minimum time possible.

Assumptions

1. You have a fairly good understanding of Fluid mechanics
2. You have a fairly good understanding of Heat transfer
3. You can work basic Calculus and differential equations
4. You are open to putting In significant effort to get better at this.
